Correction' is as follows

If you visited printed <u>map</u> control nr	Which on was nr	it was MapRun scored by map run as	So your score correction is
20	21	25	-5
21	25	25	0
25	28	30	-5
28	20	20	+10

And a couple of people said they went to 29 but it didn't register - so I've added 30 for them.

(even though I suspect they didn't get to the right junction - there was an unmapped one about 100m SE of the right one)

And one well known biker went to 12 but it didn't register so I've kindly added 15 for him
